

OASR/60-90+ - Narrative Report & Critical Items

ID: For60-01
Name: Not displayed
Age: 84

Birth Date: / /
Gender: Female

Date Filled: 10/03/2005
Informant: Not displayed
Clinician: Halldor S Gudm.

The Older Adult Self-Report (OASR) was completed by the adult to obtain her perceptions of her adaptive functioning, substance use, and problems.

On the adaptive functioning scales, the adult's scores on the Friends and Personal Strengths scales were in the normal range. No score was calculated for the Spouse/Partner scale because The adult had not lived with a partner in the previous 2 months. The adult indicated that she is currently widowed.

The adult reported that she used no tobacco or drugs in the past 2 months. She also reported that she had not been drunk nor had she consumed more than 5 alcoholic drinks a day during that period.

On the OASR problem scales, the adult's Total Problems score was in the normal range for women over age 75. Scores on all rated syndrome scales were in the normal range. The adult's scores on Critical Items are listed in the box below. The sum of her scores on the Critical Items was in the normal range.

On the DSM-oriented scales, the adult's scores on all rated scales were in the normal range.

Critical Items

In addition to the scale scores, it is important to consider scores on individual problem items. Because they may raise particular challenges for management, it is especially important to note the problems listed below that were reported with scores of 1 or 2. Look at comments made by the informant on the form in relation to these problems to obtain more information about risks associated with the problems and the contexts in which the problems occur.
